

NCT-100-S Multi-Function Cable Tester Kit can help you quickly find network cables with OOK audio during network construction and maintenance. Use TDR diagnostic technology to quickly and accurately locate fault points and accurately measure wiring diagrams and lines and Cable identification, etc.

Power-on calibration removes circuit errors due to ambient temperature and humidity.

OOK audio hunt technology: It has strong anti-interference ability in complex environment.

Line sequence measurement: Accurately draw a line sequence diagram to detect open shorts.

Cable identification: Accurate measurement of the ID adapter, with 16 ID adapters.

Cable diagnosis: TDR measurement technology, high precision, high resolution, open circuit short-circuit fault location, ultra-long-distance cable measurement, support for twisted-pair cable coaxial copper telephone line.

Loop Resistance Measurement: Accurately measure cable resistance with resolution as low as 1 ohm.

System settings: sound backlight setting, English Chinese switching, device information viewing.

Cable diagnosis	Twisted pair: UTP FTP STP Coaxial: 75 ,50 ,93 PSTN: pure copper cable Range: 0.1 meter to 450 meters Resolution: 0.1 meter Typical tolerance: ±1% or 0.2 meter Calibration: calibration cable must longer than 20 meters.
Audio tracker	Three tones available, output level is 5Vp-p
Cable ID	Support up to 16 RA-30 IDs
Wiremap	Draw map time is less than 1s
Loop resistance	Range: 0~1800ohm, tolerance is less than 1%
Language	English/Chinese

Ports	RJ-45 x1 RJ-11 x 1
Interface	2.0" LCD ,128x64 pixels LED x1 Keys x5
Weight	100g
